F-Educational plan of the discipline		

APPROVED
by the decision of the Academic Council of the Institute
of Medicine, Ecology and Physical Culture of USU
of «17» May 2023, Record No. 9/250
Chairman V. I. Midlenko
(signature, signature clarification)
« 17 » May 2023

EDUCATIONAL PLAN

Subject:	Pathological Anatomy
Faculty	Faculty of medicine T. Z. Biktimirova
Department	General and Clinical Morphology
Course	3

Speciality 31.05.01. «General medicine»

(code of the speciality, full name)

Form of education- full-time education

Date of introducing in the instruction process at USU: « 1 » of September 2023.

The program was updated at the meeting of the department: № 10 of 14.06.2024.

The program was updated at the meeting of the department: № ___ of ___ 20__.

Information about the authors:

Initials	Abbreviation of the department	Degree, scientific rank
Slesareva Elena Vasilievna	General and Clinical Morphology	Head of Department, MD, Professor

Agreed	Agreed
Head of department General and Clinical Morphology, developing discipline	Head of the graduating Department
 /Slesareva E.V./ <i>signature</i> « 17 » May 2023 yr.	 /Vise-Chripunova M.A. <i>signature</i> « 17 » May 2023 yr.

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

1. OBJECTIVES AND AIM OF PATALOGICAL ANATOMY

The aim of teaching the discipline "Pathological anatomy" is to study the basic of occurrence, development mechanisms and structural foundations of diseases to comprehend the etiology, pathogenesis, clinical manifestations of diseases

the objectives of the discipline are:

- the study of cell pathology and general pathological processes, the totality of which determines the morphological manifestations of a disease;
- the acquisition of knowledge about the etiology, pathogenesis and morphology of diseases at different stages of their development (morphogenesis), the structural foundations of recovery, complications, outcomes and long-term effects of diseases;
- the development of the morphology and mechanisms of the processes of adaptation and compensation of the body in response to the influence of pathogenic factors and changing environmental conditions;
- the study of changes in diseases that arise both in connection with changing living conditions of a person and treatment (pathomorphosis), and as a result of various manipulations (pathology of therapy).

2. PLACE OF THE SUBJECT IN THE STRUCTURE OF GEP:

The discipline "Pathological anatomy" refers to the basic part of the curriculum of the GEP specialty 31.05.01 "General Medicine".

The basic knowledge necessary to study the discipline is formed:

- in the cycle of natural sciences, including the following disciplines: anatomy; histology, embryology, cytology; biochemistry; normal physiology; propaedeutics of internal diseases; pathophysiology, clinical pathophysiology; neuroanatomy; embryonic development of body tissues; physiology of visceral systems.

The discipline provides the necessary knowledge, skills and competencies for subsequent disciplines included in the modules of clinical, therapeutic, surgical and medical and preventive disciplines.

3. LIST OF EXPECTED RESULTS OF INSTRUCTION ON THE SUBJECT (UNIT), CORELATED WITH PLANNED RESULTS OF COMPLETING THE PROGRAM

The study of the subject «Pathological anatomy » within the completion of the educational program is directed towards the formation of the following general and professional competences in students:

Competence index. Content of a competence	The proposed results of the course, correlated with indicators of achievement of competencies
GPC- 5 <i>Able to assess morphological, functional, physiological conditions and pathological processes in the human body to solve professional problems and parts of</i>	<u>To know</u> : the structure, topography and development of cells, tissues, organs and systems of the body in interaction with their function in pathology, the functional systems of the human body, their regulation and self-regulation when exposed to the external environment in health and disease; structural and functional bases of diseases and pathological processes, causes, main mecha-

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

<p><i>professional competence</i></p>	<p>nisms of development and outcomes of typical pathological processes, dysfunctions of organs and systems; concepts of etiology, pathogenesis, morphogenesis, pathological morphosis of a disease, nosology, principles of classification of diseases, basic concepts of general nosology; the role of causal factors and disease-causing conditions in the occurrence of typical pathological processes and diseases; primary pathological reactions; the development of cause-and-effect relationships in the pathology of the whole organism; the importance of the body's reactivity in the occurrence, development and outcome of typical pathological processes and diseases; patterns of pathogenesis and hygiene measures of typical pathological processes and diseases; staging of development of typical pathological processes and diseases, their complications and outcomes; syndromes and symptoms of the most common diseases;</p> <p><u>Be able to:</u> use educational, scientific, popular science literature, the Internet for professional activities; visually assess and record changes in the organs and tissues of the corpse, substantiate the nature of the pathological process and its clinical manifestations; give an opinion on the cause of death and formulate a pathological diagnosis; use biological equipment; work with magnifying equipment (microscopes, optical and simple loupes); to give a histological and physiological assessment of the state of various cellular, tissue and organ structures; describe the morphological changes of the studied macroscopic, microscopic preparations and electronic diagrams;</p> <p><u>To own:</u> methods of assessing the anatomical, physiological, and pathological conditions of the patient;</p>
<p>PC 2 <i>Readiness to collect and analyze patient complaints, his medical history, examination results, laboratory, instrumental, pathological, and other tests in order to recognize the condition or establish the presence or absence of diseases.</i></p>	<p><u>To know:</u> the modern methods of clinical, laboratory, instrumental examination of patients (including endoscopic, radiological methods, ultrasound diagnostics).</p> <p><u>To be able to:</u> conduct a primary examination of systems and organs: respiratory, cardiovascular, blood and hematopoietic organs, digestive, endocrine and urinary; outline the volume of additional studies in accordance with the prognosis of the disease, to clarify the diagnosis and obtain a reliable result.</p> <p><u>To own:</u> interpretation of the results of laboratory, instrumental diagnostic methods for pathology of internal organs.</p>

F-Educational plan of the discipline		

4. VOLUME OF THE SUBJECT

4.1. Volume of the subject in credit points (total): 7 credit points

4.2. On types of academic workload (in hours): 252

Type of academic work	Number of hours (form of education pathological anatomy)		
	Total according to the plan	Including on semesters	
		5	6
Work of students with a teacher	158		
Lectures	53	36	17
Auditory lessons:			
practical classes and seminars	105	54	51
Self-study work	58	36	22
Concurrent control (number and type: a test, a colloquium, a report)		Colloquium Testing essay	Colloquium Testing essay
Types of intermediate attestation (examination, test)	36	-	36 exam
Total number of hours on the subject	252	126	126

If it is necessary to use partially or exclusively remote educational technologies in the educational process, the table shows the number of hours of work of teaching staff with students for conducting classes in a remote format using e-learning.

4.3. Contents of the discipline (module). Distribution of hours on themes and kinds of study:

Number of hours – 252

The form of training: full time

Name of sections and themes	Total	Activity format				Form of current control
		Classroom studies			Self-study work	
		Lectures	Practical lessons	Interactive classes		
Interview, checking the work album

5. COURSE CONTENT

Section 1. General pathology

1. The subject and objectives of the discipline "pathological anatomy". Cell pathology. Autopsy	“Pathological anatomy” - its content, tasks, objects, methods and research levels. Pathological anatomical service, its significance. The concept of the disease. Pathomorphism of the disease. Death, signs of death. Causes. The concept of pathogenesis and resuscitation. General characteristics of cell pathology. Ultrastructural violations, methods for their verification. Damage. Demonstration of autopsy on Shore.
2. Necrosis. Heart attack	Definition of necrosis as local death. The concept of paranecrosis, necrobiosis, parabiosis, autolysis. Causes, development mechanisms and morphological characteristics of necrosis. Classification of necrosis. Heart attack is a type of necrosis. Causes. Kinds. Morphological characteristics. Kinds. Outcomes.
3. Compensatory-	Regeneration. The essence and biological significance of regeneration,

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

adaptive processes	regulatory mechanisms. The morphogenesis of the regenerative process. Types of regeneration. Hypertrophy and hyperplasia. Atrophy. Tissue remodeling and metaplasia. Reasons, morphological characteristics.
4. Circulatory disturbance. Thromboembolic syndrome.	Hyperemia. Arterial, venous hyperemia. Classification. Morphological manifestations. Outcomes. Ischemia. Causes. Kinds. Clinical and morphological manifestations. Reasons, stages of thrombosis. Local and general factors of thrombosis. Types of blood clots. Disseminated intravascular coagulation syndrome. Embolism. Reasons, types, outcomes.
5. Colloquium on topics 1-4	The solution of situational problems. Diagnosis of drugs in small groups
6. Dystrophy. Parenchymal dystrophies.	Dystrophy as an expression of tissue metabolism and a form of damage. Causes of dystrophy. Morphogenetic mechanisms. Classification of dystrophies. Hereditary fermentopathies (accumulation diseases). Parenchymal protein, carbohydrate dystrophies.
7. Stromal-vascular dystrophy.	Mesenchymal protein dystrophy. Amyloidosis as a form of mesenchymal protein dystrophy. Classification of amyloidosis, morphological characteristics. General and local obesity (lipomatosis). Mesenchymal fatty, carbohydrate dystrophies.
8. Mixed dystrophy.	Disorders of chromoprotein metabolism. Violations of the exchange of nucleoproteins. Disorders of mineral metabolism. The pathology of calcium metabolism is calcifications. Violation of phosphorus metabolism. The formation of stones. Causes, mechanisms and consequences of stone formation.
9. Colloquium on topics 6-8	The solution of situational problems. Diagnosis of drugs in small groups
10. Inflammation.	The essence, patterns of development of inflammation. The morphology of the kinetics of the inflammatory reaction. Classification. Exudative inflammation. Reasons, types. Outcomes.
11. Productive inflammation.	Productive inflammation, its types. Interstitial, granulomatous, inflammation with the formation of polyps. Reasons, development mechanisms. Morphological characteristics. Outcomes. Specific inflammation. Reasons, development mechanisms. Morphology.
12. Immunological processes.	The concept of the reactivity of the body (normo-hypo-hyperemia). Allergy. Reactions of delayed and immediate types. Immunodeficiency conditions. Morphological manifestations.
13. Tumors. Morphogenesis and histogenesis.	The concept of tumor growth. Etiology. Pathogenesis. Precancerous conditions. Dysplasia and cancer. The importance of biopsy in oncology. The structure of the tumor. Growth, classification. Criteria for malignancy. Metastasis. The concept of relapse.
14. Epithelial tumors.	Epithelial tumors (organ-specific and organ-specific). Ways of metastasis. Tumors of individual organs.
15. Mesenchymal tumors. Tumors of the nervous tissue.	Mesenchymal tumors. Sarcomas and its types. Tumors from melanin-forming tissue. Nevus, melanoma. Tumors of the nervous tissue: neuroectodermal, meningovascular, autonomic and nervous systems.
16. Hemoblastosis	Systemic tumor diseases of the hematopoietic tissue. Leukemia. Acute leukemia, its types. Chronic leukemia, classification. Lymphomas are regional tumor diseases. Causes, forms, morphological characteristics.
17. Colloquium on	The solution of situational problems. Diagnosis of drugs in small groups

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

topics 10-16	
18. Diagnosis of drugs	Description of microscopic structures and signs of general pathological processes on histological preparations.

Section 2. Private pathology

19. Hypertension. Atherosclerosis.	Arterial hypertension. Clinical and morphological characteristics of hypertension. Forms, stages, complications. Atherosclerosis. Stage of atherosclerosis. Clinical and morphological forms, their characteristics, causes of death.
20. Pathomorphology of heart disease.	Coronary heart disease, etiology and pathogenesis. Acute coronary artery disease. Chronic coronary heart disease, morphological picture, complications, causes of death. Endocarditis. Myocarditis. Classification. Causes, development mechanisms, signs, outcomes. Cardiomyopathy Cerebrovascular disease.
21. Rheumatic diseases	The concept of rheumatic (collagen) diseases. Morphology of immune disorders and the process of systemic disorganization of connective tissue. Rheumatism (etiology, pathogenesis, pathomorphology). Changes in the heart and blood vessels, rheumatic heart diseases. Complications and causes of death. Rheumatoid arthritis. Etiology, pathogenesis, morphology.
22. Pathomorphology of lung diseases.	Classification of acute pneumonia. Croupous pneumonia, broncho-pneumonia, interstitial pneumonia: pathogenesis, morphological characteristics. Chronic non-specific lung diseases: etiology, pathogenesis, classification, morphological signs. Chronical bronchitis. Bronchiectatic disease. Chronic lung abscess. Chronic pneumonia Pneumosclerosis Emphysema. Interstitial lung disease. Bronchial asthma. Lung cancer.
23. Colloquium on topics 19-22	The solution of situational problems. Diagnosis of drugs in small groups
24. Pathomorphology of diseases of the stomach.	Gastritis. Acute gastritis: etiology, pathogenesis, morphological forms, their characteristics, complications. Chronic gastritis: causes, development mechanisms, morphological forms, their characteristics. Chronic gastritis, as a precancerous condition of the stomach. Peptic ulcer of the stomach and duodenum. Pathological anatomy, complications and outcomes. Chronic gastric ulcer as a precancerous condition. Stomach cancer.
25. Pathomorphology of intestinal diseases.	Enteritis. Acute enteritis. Chronic enteritis: causes, development mechanisms, morphological forms. Colitis. Nonspecific ulcerative colitis. Crohn's disease. Appendicitis: etiology, pathogenesis, classification, pathological anatomy of acute and chronic appendicitis, complications. Colon cancer, forms, morphological characteristics.
26. Pathomorphology of liver disease.	Hepatositis, toxic liver dystrophy, fatty hepatosis. Hepatitis (acute and chronic, primary and secondary). Liver cirrhosis: etiology, pathogenesis, morphogenesis, modern classification. Liver cancer. Macro and microscopic forms of cancer, complications, patterns of metastasis. The value of liver cirrhosis as a precancerous condition.
27. Pathomorphology of kidney disease.	Glomerulonephritis: modern classification, etiology and pathogenesis, morphology, complications, outcomes. Nephrotic syndrome: primary

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

	and secondary. Acute renal failure: etiology, pathogenesis, morphological characteristics. Chronic tubulopathies. Paraproteinemic nephrosis, gouty kidney. Pyelonephritis. Renal stone disease, pathological anatomy, complications, outcomes, polycystic kidney disease. Nephrosclerosis Tumors of the kidneys.
28. Colloquium on topics 24-27	The solution of situational problems. Diagnosis of drugs in small groups
29. Pathomorphology of diseases of the endocrine system.	Pituitary disorders: acromegaly, pituitary dwarf growth, cerebral pituitary cachexia, Itsenko-Cushing's disease, adipose-genital dystrophy: etiology, pathogenesis, morphology. Pituitary tumors. Adrenal disorders: Addison's disease, adrenal tumors. Thyroid: goiter. Thyroid tumors, morphology, complications. Pathomorphology of the parathyroid glands: hyperparathyroidism, hypoparathyroidism. Diabetes.
30. Pathomorphology of genital diseases.	Dyshormonal diseases: prostatic hypertrophy, glandular hypertrophy of the uterine mucosa. Benign breast dysplasia. Inflammatory diseases: acute and chronic endometritis. Tumors of the genitals and breast, ovarian cancer, prostate cancer, testicular cancer.
31. Viral infections. AIDS.	Introduction to the nosology of the infectious process. Classification. General morphology of the infectious process. Features of the infectious process. Acute respiratory viral infections (ARVI), classification, factors determining the incidence. Morphology. Outcomes with influenza, parainfluenza. adenovirus infection. Measles. Etiopathogenesis. Features of morphology. Complications Outcomes. AIDS (acquired immunodeficiency syndrome). Etiopathogenesis. Periods of flow. Morphology.
32. Bacterial infections.	General characteristics of bacterial airborne infection. Diphtheria. Scarlet fever. Etiopathogenesis. Morphological picture. Complications Meningococcal infection. Etiology. Pathogenesis. Morphological picture. Complications Outcomes. Dysentery. Etiopathogenesis. Stages of morphogenesis. Diagnostics. Typhoid fever. Etiology. Pathogenesis. Morphological picture. Cholera. Epidemiology and pathogenesis. Morphology. Complications Causes of death. Amoebiasis. Etiology. Pathogenesis. Morphological picture. complications.
33. Tuberculosis.	Tuberculosis: classification, etiology, pathogenesis. Primary, hematogenous, secondary tuberculosis. Pathological anatomy, pathomorphosis, complications, outcomes.
34. Sepsis.	Sepsis - as a form of infection. Causes. Pathogenesis. Morphogenesis. Clinical and morphological options. Manifestations. Complications Exodus.
35. Colloquium on topics 29-34.	The solution of situational problems. Diagnosis of drugs in small groups

6. TOPICS OF PRACTICAL CLASSES AND SEMINARS

Section 1. General pathology.

Lesson 1. Pathological anatomy. Tasks, methods of teaching and studying the subject. Death,

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

signs of death. Cell pathology. The form of the exercise is a practical lesson.

Questions to the topic:

1. Death. General characteristic: The concept of "death", the concept of thanatogenesis. Classification depending on the cause and reversibility of life.
2. Clinical death: definition of a concept, duration, signs, concept of resuscitation.
3. Biological death: definition of a concept, signs, time of occurrence and mechanisms of their development.
4. Pathology of the nucleus. Pathology of the cytoplasm.

Questions for independent study:

1. The content, tasks, objects and methods of pathological anatomy.
2. The concept of the disease. Pathomorphism of the disease.
3. Ultrastructural disturbances in the cell.

Lesson 2. Necrosis, types of necrosis and necrobiosis. The form of teaching is a practical lesson.

Questions to the topic:

1. The definition of "necrosis", "paranecrosis", "necrobiosis", "autolysis". Causes of necrosis.
2. Classification of necrosis, clinical and morphological forms.
3. Heart attack - a type of necrosis, clinical significance
4. Outcomes, meaning for the body.

Questions for independent study:

1. Manifestations of necrosis at the cell level.
2. Macro and microscopic signs of necrosis.

Lesson 3. Compensatory-adaptive processes. Regeneration. Atrophy. Hypertrophy. Metaplasia. The form of teaching is a practical lesson.

Questions to the topic:

1. The concept of compensatory-adaptive processes. Types, stages.
2. Regeneration. Classification (physiological, pathological). Localization. Levels. Morphological manifestations. Outcomes.
3. Hypertrophy. Kinds. Functional value. Morphological characteristics.
4. Atrophy. Classification, Morphological manifestations. Outcomes
5. Structural adjustment and tissue organization. Kinds. Functional value.
6. Metaplasia, its types.

Questions for independent study:

1. Regeneration of individual tissues and organs.
2. Wound healing.
3. Sclerosis.

Lesson 4. Circulatory disturbance. Hyperemia. Bleeding. Stasis. Thrombosis. Embolism. Myocardial form of teaching - a practical lesson.

Questions to the topic:

1. Arterial, venous hyperemia. Definition, development mechanisms, classification, morphological manifestations, outcomes.
2. Bleeding. Species, morphology, outcomes.
3. Thrombosis: Definition, thrombosis mechanisms, classification, morphology, clinical signifi-

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

cance and outcomes.

4. Embolism: Definition of a concept, path of movement, characteristic, outcomes.

5. Heart attacks: Etiology, pathogenesis, species, morphological picture, complications, outcomes.

Questions for independent study:

1. Violation of the content of tissue fluid (edema, exsiccosis). Etiology, classification, morphology, complications, outcomes

2. Impaired lymph circulation. Classification, morphology.

Lesson 5. Colloquium on topics 1-4. Form of teaching - work in small groups for the diagnosis of micropreparations. The solution of situational problems.

Micropreparations for diagnosis.

1. No. 1 REGENERATIVE MYOCARDIAL HYPERTROPHY

2. No. 3 NECROSIS OF THE KIDNAL CANCER

3. NO. 4 LIVER ATROPHY OF THE LIVER

4. No. 6 GOITER HASHIMOTO

5. No. 7 NECROSIS OF THE PLACENTA WITH DYSTROPHIC CONDITIONING OF THE NAP

6. No. 13 MUSCULAR LIVER

7. No. 14 HEMORRHAGIC INFARCTION OF THE EASY

8. No. 18 KIDNEY HEMORRHAGE

9. No. 21 IRON HYPERPLASIA ENDOMETRY

10. No. 24 BROWN LUNG INDUCTION

11. No. 29 ORGANIZED CLOSE IN VIENNA

12. No. 33 COLLOIDAL GOITER

13. No. 35 FAT EMBOLASIS OF LUNG VESSELS

14. No. 36 OBTURING FRESH RED CLOSE IN VIENNA

15. No. 39 HEMORRHAGE IN THE BRAIN

Lesson 6. Parenchymal dystrophies. The form of teaching is a practical lesson.

Questions to the topic:

1. General pathology of dystrophy, Determination of dystrophy. Etiology, developmental mechanisms, classification, localization,

2. Types of parenchymal dystrophies (protein, fat, carbohydrate), morphological picture, outcomes.

3. Hereditary dysproteinoses. Development mechanisms.

Questions for independent study:

1. Dystrophy as an expression of tissue metabolism and form of damage.

2. Diseases of accumulation.

Lesson 7. Mesenchymal dystrophies. The form of teaching is a practical lesson.

Questions to the topic:

1. General pathology: definition, localization, development mechanisms, classification.

2. Mesenchymal protein dystrophies (mucoïd swelling, fibrinoid swelling, hyalinosis, amyloidosis). Etiology, morphogenesis, outcomes.

3. Mesenchymal fatty degeneration. Disorders of the metabolism of neutral fats, cholesterol. Eti-

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

ology, morphogenesis, outcomes.

4. Mesenchymal carbohydrate dystrophy. Etiology, morphogenesis, outcomes.

Questions for independent study:

1. Inherited carbohydrate dystrophy.
2. Inherited fatty degeneration.

Lesson 8. Mixed dystrophies. Impaired chromoprotein metabolism. The form of teaching is a practical lesson.

Questions to the topic:

1. General pathology of mixed dystrophy. Definition, classification, distinctive features.
2. Hemoglobinogenic pigmentation (hemosiderin, ferritin, hematoidin, bilirubin, hematin). Mechanisms of education, localization, morphology.
3. Proteinogenic pigmentation (melanin, adrenochrome, pigment enterochromaffin cells). Mechanisms of education, localization, morphology.
4. Lipidogenic pigmentation (lipofuscin, lipochromes). Mechanisms of education, localization, morphology.
5. Violations of the exchange of nucleoproteins. The composition of nucleoproteins. Manifestations of violations of nucleoproteins (gout, uric acid infarction, urolithiasis).
6. Lime dystrophy. Classification, causes and development mechanisms. Morphology. Outcomes.

Questions for independent study:

1. Disorders of phosphorus metabolism.
2. Violation of the metabolism of trace elements - copper, potassium, sodium, chlorine.

Lesson 9. Colloquium on topics 6-8. Form of teaching - work in small groups for the diagnosis of micropreparations. The solution of situational problems.

Micropreparations for diagnosis.

1. No. 41 MURRID SWELLING OF THE EPITHELIUM OF THE KINDERED KIDNAL CANAL
2. N ° 44 TOTAL SPLEEN
3. No. 48 LIVER AMYLOIDOSIS
4. No. 49 KIDNEY AMYLOIDOSIS
5. No. 60 FATAL DYSTROPHY OF THE LIVER
6. No. 61 OBESITY OF MYOCARDIUM
7. No. 62 DYSTROPHIC DEFENSE IN KIDNEY TUBERCULOSIS
8. No. 74 ANTHRACOSIS OF BRONCHIAL NODE
9. No. 24 BROWN LUNG INDUCTION

Lesson 10. Inflammation. General information about inflammation. Exudative inflammation. The form of teaching is a practical lesson.

Questions to the topic:

1. General pathology of inflammation. Definition of a concept. Biological entity. Etiology, pathogenesis of inflammation.
2. Morphological characteristics of inflammation. Stage of inflammation (alteration, exudation,

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

proliferation), classification.

3. Exudative inflammation. Localization, causes, types, outcomes.

Questions for independent study:

1. The kinetics of inflammatory reactions.
2. Mediators of inflammation - a characteristic, the specifics of the allocation in the focus of inflammation.

Lesson 11. Inflammation. Productive and specific inflammation. The form of teaching is a practical lesson.

Questions to the topic:

1. General pathology of productive inflammation. Definition, developmental conditions, classification.
2. Morphological characteristics of certain types of productive inflammation (inter-exact, granulomatous, inflammation around parasites, with the formation of polyps and condylomas).
3. Specific inflammation. Etiology. Pathogenesis, Species, Outcomes.

Questions for independent study:

1. The reaction of lymphoid tissue with inflammation.
2. The importance of inflammation as a general pathological reaction of the body.

Lesson 12. Immunopathological processes. The form of teaching is a practical lesson.

Questions to the topic:

1. The definition of "immunopathological processes." Types of immune reactions. Methods of morphological research. Etiology. Pathogenesis.
2. Thymus pathology (hypoplasia, atrophy, hyperplasia, thymomegaly). Morphological picture.
3. Changes in peripheral lymphoid tissue in violation of immunogenesis. Types of pathology. Morphological picture.
4. Autoimmune diseases. Etiology. Pathogenesis, classification. Morphological manifestations.
5. Hypersensitivity reaction. Types. Development mechanisms. Morphological characteristics.
6. Immunodeficiency conditions. Classification. Etiology. Pathogenesis. Morphological manifestations.

Questions for independent study:

1. Hereditary immunodeficiency conditions.

Lesson 13. General pathology of tumors. The form of teaching is a practical lesson.

Questions to the topic:

1. The concept of a tumor, tumor growth, distinctive features of tumors. Theories of tumor de-

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

velopment. Pretumor processes.

2. Histogenesis, tumor morphogenesis. Macro and microscopic signs of tumors, tumor growth.
3. Signs of benign and malignant tumors. properties of tumor cells. Classification of tumors.

Questions for independent study:

1. Dysplasia and cancer. The importance of biopsy in oncology.

Lesson 14. Epithelial tumors. The form of teaching is a practical lesson.

Questions to the topic:

1. Epithelial tumors (organ-specific and organ-specific).
2. Ways of metastasis.
3. Tumors of individual organs.

Questions for independent study:

1. Theories of carcinogenesis.

Lesson 15. Mesenchymal tumors. Tumors of melanin-forming and nervous tissue. The form of teaching is a practical lesson.

Questions to the topic:

1. The principles of classification of mesenchymal tumors. Histogenesis, morphogenesis. Criteria for malignancy and benignity. Ways of metastasis.
2. Tumors of melanin-forming tissue. Localization. Histogenesis. Morphological characteristics.
3. Tumors of the nervous tissue and meninges. Classification. Ways of metastasis. Features of the structure.

Questions for independent study:

1. Teratomas.
2. Tumors of the autonomic nervous system.

Lesson 16. Hemoblastoses. The form of teaching is a practical lesson.

Questions to the topic:

1. The concept of definition of leukemia. Classification, Group characteristics. Pathogenesis and morphogenesis of leukemia.
2. Leukemia (acute, chronic). Morphological characteristics. Complications Outcomes.
3. Regional tumor diseases of the blood-forming organs, Classification. Morphology. Outcomes.

Questions for independent study:

1. Hodgkin's disease. Variants of the course.
2. Non-Hodgkin lymphomas.

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form

Section 2. Private pathology.

Lesson 19. Hypertension. Atherosclerosis. The form of teaching is a practical lesson.

Questions to the topic:

1. Causal factors of atherosclerosis. Risk factors. Stages of morphogenesis and the course of atherosclerosis:
2. Types of complications of atherosclerosis. Outcomes.
3. Hypertension. Symptomatic hypertension. Differential diagnosis of hypertension and symptomatic hypertension.
4. Etiology, pathogenesis of hypertension. Risk factors. Reflex, basic, humoral factors for the occurrence of hypertension.
5. Morphology of hypertension. Clinical and morphological stages.

Questions for independent study:

1. The definition of atherosclerosis, arteriosclerosis, arteriosclerosis.
2. Cardiosclerosis.
3. Theories of the occurrence of hypertension.

Lesson 20. Pathomorphology of heart disease. Cardiomyopathy Cerebro-vascular disease. The form of teaching is a practical lesson.

Questions to the topic:

1. The concept of coronary heart disease. Causal factors. Risk factors. Classification of coronary insufficiency.
2. Myocardial infarction. Classification. Complications Outcomes. Causes of death.
3. Cerebrovascular disease. Definition of a concept. Development mechanisms. Morphology.
4. Cardiomyopathies. Classification. Morphology.

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

Questions for independent study:

1. Myocarditis.
2. Heart defects: congenital and acquired.

Lesson 21. Rheumatic diseases. Rheumatism. The form of teaching is a practical lesson.

Questions to the topic:

1. The definition of "rheumatic disease." Nosological forms. Etiopathologist.
2. Rheumatism. Etiopathogenesis. Morphology of connective tissue lesions. Nonspecific reactions. Clinical and anatomical forms.
3. Rheumatic heart disease. Endocarditis, myocarditis, pericarditis. Heart defects. Nosological and morphological variants of defects.
4. Rheumatic diseases of organs and systems. Etiopathogenesis. Morphology. Complications of the underlying disease.

Questions for independent study:

1. Systemic lupus erythematosus. Etiopathogenesis. Morphology. Complications
2. Nodular periarteritis. Etiopathogenesis. Morphology. Complications
3. Systemic scleroderma, dermatomyositis.

Lesson 22. Pathomorphology of lung diseases. The form of teaching is a practical lesson.

Questions to the topic:

1. Classification of respiratory diseases.
2. Croupous pneumonia. Definition of a concept. Etiopathogenesis. Morphological pattern. Complications Outcomes.
3. Focal pneumonia. Classification. Morphological picture. Complications Outcomes.
4. Bronchial asthma. Classification. Morphological picture. Complications Outcomes.
5. Chronic bronchitis. Classification. Morphology. Complications Outcomes.
6. Chronic pneumonia. Definition of a concept. Development mechanisms. Morphology.
7. Bronchiectasis. Emphysema. Atelectasis. Classification. Development mechanisms. Causes of death of patients.
8. Lung cancer. Clinical and morphological forms. Metastases Complications

Questions for independent study:

1. Interstitial lung disease.
2. Chronic non-specific lung diseases, etiology, pathogenesis. The role of the body in the emergence and development.

Lesson 23. Colloquium on topics 19-22. Form of teaching - work in small groups for the diagnosis of micropreparations. The solution of situational problems.

Micropreparations for diagnosis.

Lesson 24. Pathomorphology of diseases of the stomach. The form of teaching is a practical lesson.

Questions to the topic:

1. Gastritis. Acute gastritis: etiology, pathogenesis, morphological forms, their characteristics, complications.
2. Chronic gastritis: causes, development mechanisms, morphological forms, their characterization.
3. Chronic gastritis, as a precancerous condition of the stomach.
4. Peptic ulcer of the stomach and duodenum. Pathological anatomy, complications and outcomes.
5. Chronic gastric ulcer as a precancerous condition.
6. Cancer of the stomach. Clinical, anatomical, and morphological forms of stomach cancer. Ways of metastasis. Complications

Questions for independent study:

1. Diseases of the esophagus - esophagitis, diverticula, cancer of the esophagus.
2. Diseases of the oral cavity - stomatitis, glossitis, tonsillitis.

Lesson 25. Pathomorphology of intestinal diseases. The form of teaching is a practical lesson.

Questions to the topic:

1. Enteritis. Acute enteritis.
2. Chronic enteritis: causes, development mechanisms, morphological forms.
3. Appendicitis: etiology, pathogenesis, classification, pathological anatomy of acute and chronic appendicitis, complications.
4. Cancer of the small intestine.
5. Colitis. Classification. Morphology. Complications
6. Nonspecific ulcerative colitis. Disease
7. Colon cancer, shape, morphological characteristics.

Questions for independent study:

1. Pathomorphology of diseases of the rectum.

Lesson 26. Pathomorphology of diseases of the liver and biliary tract. The form of teaching is a practical lesson.

Questions to the topic:

1. Classification of liver diseases. General pathology. Definition of the concepts of hepatitis, cirrhosis.
2. Hepatoses. Kinds. Etiopathogenesis. Morphological picture. Outcomes.
3. Hepatitis. Classification. Etiology, pathogenesis. Morphological picture of liver changes in

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

various types of hepatitis. Outcomes. Causes of death of patients.

4. Cirrhosis of the liver: etiology, pathogenesis, morphogenesis, modern classification.

5. Liver cancer. Macro and microscopic forms of cancer, complications, patterns of metastasis.

Questions for independent study:

1. Pancreatitis: acute, chronic.

2. Diseases of the biliary tract and gall bladder.

3. The significance of cirrhosis as a precancerous condition.

Lesson 27. Pathomorphology of kidney disease. The form of teaching is a practical lesson.

Questions to the topic:

1. Classification of kidney disease. Definition of a concept. General pathomorphology.

2. Glomerulopathy. Glomerulonephritis. Classification. Etiopathogenesis. The mechanism of immune conflict. Clinical and anatomical forms.

3. Nephrotic syndrome. Classification. The mechanism of development. Morphological manifestations. Pyelonephritis. Amyloidosis.

4. Renal failure. Development mechanisms. Stages, their morphological picture. Extrarenal complications. Outcomes.

5. Urolithiasis. The formation of stones. Complications Outcomes.

6. Cancer of the kidney. Morphological types.

Questions for independent study:

1. Nephrotic syndrome: primary and secondary.

2. Paraproteinemic nephrosis.

3. Nephrosclerosis.

Lesson 28. Colloquium on topics 24-27. Form of teaching - work in small groups for the diagnosis of micropreparations. The solution of situational problems.

Micropreparations for diagnosis.

Lesson 29. Diseases of the endocrine glands. The form of teaching is a practical lesson.

Questions to the topic:

1. Diseases of the pituitary gland. Classification. The main clinical and morphological manifestations.
2. Diseases of the adrenal glands. Complications Outcomes.
3. Pathology of the thyroid gland. Classification of goiter. Development mechanisms. Morphology. Outcomes.
4. Parathyroid osteodystrophy. Hypoparathyroidism. Features of manifestation.
5. Diabetes mellitus. Etiopathogenesis. Morphological manifestations. Complications Causes of death.

Questions for independent study:

1. Pathology of the hypothalamus. Hypothalamic syndrome.
2. Tumors of the endocrine glands.

Lesson 30. Pathomorphology of genital diseases. Pathology of pregnancy. The form of teaching is a practical lesson.

Questions to the topic:

1. Dyshormonal and inflammatory diseases of the female genital organs and mammary gland. Breast dysplasia. Endometritis.
2. Tumors of the female genital organs and mammary gland. Classification. Metastasis.
3. Diseases of pregnancy. Complications Outcomes.
4. Dyshormonal diseases of the male genital organs, prostatic hypertrophy,
5. Tumors of the male genital organs, prostate cancer, testicular cancer.

Questions for independent study:

1. Pathology of the afterbirth. Malformations of the placenta.
2. Birth injury. Perinatal pathology.

Lesson 31. Viral infections. AIDS. The form of teaching is a practical lesson.

Questions to the topic:

1. Acute respiratory viral infections (ARVI), classification, factors determining the incidence. Morphology. Outcomes with influenza, parainfluenza. adenovirus infection.
2. Measles. Etiopathogenesis. Features of morphology. Complications Outcomes.
3. AIDS (acquired immunodeficiency syndrome). Etiopathogenesis. Periods of flow. Morphology.

Questions for independent study:

1. Rickettsioses. Definition of a concept. Etiopathogenesis. Morphology of typhus. Complications.

Lesson 32. Bacterial airborne infections (diphtheria, scarlet fever, meningococcal infection). The

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

form of teaching is a practical lesson.

Questions to the topic:

1. General characteristics of a bacterial airborne infection.
2. Diphtheria. Scarlet fever. Etiopathogenesis. Morphological picture. Complications
3. Meningococcal infection. Etiology. Pathogenesis. Morphological picture. Complications. Outcomes.
4. Dysentery. Etiopathogenesis. Stages of morphogenesis. Diagnostics.
5. Typhoid fever. Etiology. Pathogenesis. Morphological picture.
6. Cholera. Epidemiology and pathogenesis. Morphology. Complications Causes of death.

Questions for independent study:

1. Whooping cough. Etiology. Pathogenesis. Morphological picture. complications.
2. Amoebiasis. Etiology. Pathogenesis. Morphological picture. complications.
3. Intestinal coli infection. Pathogenesis. Morphological picture. complications.

Lesson 33. Tuberculosis. The form of the exercise is a practical lesson.

Questions to the topic:

1. Tuberculosis. Etiology. Pathogenesis. General morphology. Classification.
2. Primary tuberculosis complex, PTC variants, course, healing. Morphological signs.
3. Hematogenous tuberculosis. Routes of distribution, classification. Morphological signs. Localization of tuberculosis foci.
4. Secondary tuberculosis. Clinical and anatomical signs. Pathomorphosis. Complications Outcomes.

Questions for independent study:

1. Drug pathomorphism of tuberculosis.
2. Extrapulmonary forms of tuberculosis.

Lesson 34. Sepsis. The form of the exercise is a practical lesson.

Questions to the topic:

1. Sepsis. Definition of a concept. Distinctive (from infection) symptoms. Etiopathogenesis. Classification. General and local manifestations.
2. Septicemia. Local and general changes.
3. Septicopyemia. Clinical and morphological manifestations. Complications Causes of death.
4. Chroniosepsis. Features of the clinical anatomical picture. Morphological manifestations.

Questions for independent study.

1. Septic bacterial endocarditis.

Lesson 35.

Colloquium on topics 29-34. The form of work is work in small groups for the diagnosis of micropreparations. The solution of situational problems.

Micropreparations for diagnosis.

7. LABORATORY CLASSES

- this type of work is not provided for by the thematic plan.

8. SUBJECTS OF COURSE PAPERS, TESTS, ESSAYS

- this type of work is not provided for by the thematic plan.

9. QUESTIONS FOR EXAM ON DISCIPLINE «PATHOLOGICAL ANATOMY»

1. Pathological anatomy. Content, purpose, objectives of the subject. Connection with other related disciplines.

2. History of the development of pathological anatomy in Russia and foreign countries.

3. Methods of pathological anatomy. Autopsy of the dead as one of the methods of studying the essence of diseases, clinical anatomical analysis. Investigations of autopsy materials, biopsies and surgical materials, their significance for intravital and postnatal recognition and dynamic study of diseases.

4. Damage. The nature, causes, mechanisms and types of damage.

5. Pathology of protein metabolism.

6. General death. Classification. Posthumous changes, developmental mechanisms. The concept of resuscitation.

7. Local death. (necrosis, necrosis), main types, causes of development, macro and microscopic signs.

8. Gangrene. Definition of a concept. Types of gangrene, characteristic, outcomes.

9. Heart attack, as a form of necrosis. Classification. Types of heart attacks in different organs. The dependence of a heart attack on developmental conditions. Outcomes. Dependence of heart attack outcomes.

10. Venous congestion. General and local. The consequences of venous plethora. Morphological manifestations.

11. Lymphostasis. Causes. Outcomes.

12. Arterial hyperemia. Reasons, types, outcomes. Morphology of metabolic disorders in hyperemia.

13. Staz. Causes of development, morphology, outcomes.

14. Bleeding. Concept. Kinds. causes, morphology. Outcomes.

15. Thrombosis. Reasons, thrombosis mechanism, thrombosis factors.

16. Types of blood clots. Subsequent changes in blood clots. The value of thrombosis. Outcomes of blood clots.

17. ICE - a syndrome. Causes, stages of development, outcomes.

18. Embolism. The laws of motion of dense emboli. Types of emboli.

19. Types of embolism, causes, outcomes. Value.

20. Dystrophy. General mechanisms of occurrence. causes of dystrophic processes. Classification. Histochemical methods for the study of dystrophic processes.

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

21. Types of protein dystrophy. Macro - and microscopic manifestations. Outcomes.
22. Horny dystrophy. Causes, morphology, outcomes, cause of transition to cancer.
23. Fatty degeneration. Reasons, morphogenesis, classification. Violation of fat content in tissues. Outcomes.
24. Carbohydrate dystrophy. Mucous dystrophy. Causes, morphology, outcomes. Age features.
25. Extracellular dysproteinoses. Classification. Causes, morphology, outcomes. Hyalinosis, causes, options.
26. Mucoïd and fibrinoid swelling. Causes, morphology, outcomes.
27. Hyalinosis. Classification, types of hyalycosis for a reason. Morphology. Outcomes.
28. Amyloidosis. Stages and theories of the formation of amyloidosis. Causes, morphology, outcomes.
29. Stromal vascular fatty degeneration. General and local fatty degeneration. Causes, morphology, outcomes.
30. Impaired carbohydrate metabolism (extracellular dystrophy). Reasons, morphology. Outcomes. Features of impaired carbohydrate metabolism depending on age. The accumulation of glycogen, pathomorphosis.
31. Exogenous and endogenous pigmentation. Classification. Causes, manifestations, outcomes.
32. Hemoglobinogenic pigments. Hemosiderosis, hemomelanos. Causes, morphology, outcomes.
33. Disorders of the exchange of bile pigments. Types of jaundice. Reasons, morphology. Mechanisms of jaundice formation. Differential diagnosis of the morphological picture of jaundice in the liver.
34. Lipidogenic pigments. Causes of metabolic disorders, morphology.
35. Violation of the exchange of nucleoproteins. Urolithiasis disease. The mechanisms of deposition of uric acid stones, complications, outcomes.
36. Lime dystrophy. Classification. Mechanisms of calcium metabolism disorders, outcomes.
37. The formation of stones (stones). Mechanisms, theories of education, types of stones. Complications, outcomes.
38. The biological nature of inflammation. Causes of development, morphology and pathogenesis of the stages of inflammation.
39. Classification of inflammation. Exudative inflammation, causes of exudation, manifestations. Outcomes.
40. Fibrinous inflammation. Species, localization, morphology, outcomes.
41. Purulent inflammation. Kinds. Causes of development, morphology, outcomes.
42. Productive inflammation. Classification. Causes. Morphology. General patterns of inflammation.
43. Catarrhal inflammation, localization, species, morphology, outcomes.
44. Granuloma. Concept Types of granulomas, structure.
45. Tuberculous tubercle, developmental phases, types of tubercles, outcomes.
46. Productive inflammation around animal parasites (echinococcosis, cysticercosis, trichinosis). Morphology, complications, outcomes.
47. The importance of the immunological state of the body for inflammation. Inflammation and allergies. Morphology of the reactions of GNT and HRT.
48. Atrophy. Classification, morphological features. Brown atrophy, senile atrophy.
49. Hypertrophy, causes of development, outcomes. Species, morphological characters. False hypertrophy.

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

50. Metaplasia, hyperplasia, dysplasia. Concept. Value. Outcomes. The mechanisms of cancer.
51. Wound healing. Stage of healing, morphological characteristics. Outcomes.
52. Regeneration. The overall value of regeneration. Forms of regeneration. types of regulation, sources of the process.
53. Classification of regeneration. Bone tissue regeneration.
54. Regeneration of blood, bone marrow, blood vessels.
55. Regeneration of epithelial and muscle tissue.
56. Tumors. The concept of tumor growth. Theories of Origin. Classification. The importance of biopsy in oncology.
57. Features of the tumor cell. Signs of atypism. Benign and malignant. Criteria for malignancy
58. Metastasis, types, causes, stages of development. Relapse, causes of relapse, types. Metastatic cascade.
59. Benign tumors from the epithelium. Classification, localization, outcomes.
60. Malignant tumors from the epithelium (cancers from the integumentary and glandular epithelium). The main signs of a malignant tumor.
61. Benign tumors from connective tissue. Signs of good quality.
62. Malignant tumors from connective tissue. Signs of malignancy, metastatic pathways.
63. Tumors from muscle tissue. Classification, growth, outcomes, metastatic pathways.
64. Opyxols from melanin-forming tissue. Classification, growth, outcome.
65. Tumors of their nerve tissue. Classification, growth, outcome.
66. Tumors from the vessels. Classification, growth, outcome.
67. Teratomas and teratoblastomas. Features of the development of these tumors. Signs
68. Endocarditis. The concept, causes, types of endocarditis. Fibroplastic endocarditis. Morphology, outcomes.
69. Myocarditis. Concept. Ideopathic myocarditis. Causes, species, morphology, outcomes.
70. Acquired heart defects. Causes, pathogenesis, types of defects, outcomes.
71. Cardiosclerosis. Species, morphology, outcomes.
72. Atherosclerosis, theories of atherosclerosis, pathogenesis, Clinical and morphological forms, complications.
73. Stages of atherosclerosis morphogenesis. Reasons for the development of stages.
74. Hypertension. Causes, pathogenesis. Types, stages of hypertension, morphology, outcomes.
75. Clinical and morphological forms of hypertension. Complications Causes of death.
76. Coronary heart disease. Causes, pathogenesis, forms, morphology. Ischemic myocardial dystrophy. Acute heart failure.
77. Myocardial infarction. Concept, causes of development. Classification, morphology, complications, causes of death.
78. Cardiomyopathy. Types, causes, complications.
79. Cerebrovascular disease. Etiology, pathogenesis, classification, pathology, outcomes.
80. The concept of rheumatic diseases, immunomorphology of disorganization of connective tissue. General patterns of development of these diseases.
81. Rheumatism. Stages of development of rheumatism. Morphological manifestations. Clinical and anatomical forms.
82. Rheumatic changes in the heart and blood vessels, complications, outcomes.
83. Croupous pneumonia. Etiology, pathogenesis, stages of development, composition of exudate, pathology. Complications, causes of death.
84. Bronchopneumonia. Causes, pathogenesis, pathology, complications.
85. Interstitial pneumonia, etiology, pathological anatomy.
86. Chronic non-specific lung diseases. Classification, reasons. Chronic bronchitis, bronchiectasis.
87. Emphysema. Causes, pathogenesis, pathological anatomy, outcomes. Pulmonary heart.
88. Bronchial asthma. Causes, pathogenesis, pathological anatomy, outcomes
89. Chronic pneumonia. Causes, pathology, outcomes. Pulmonary heart, developmental mechanism.

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

90. Lung cancer. Classification, features of the course, pathological anatomy of metastases, three groups of complications.
91. Pneumoconiosis. Concept. Causes. Pathogenesis. Silicosis. Pathanatomy. Outcomes.
92. Acute gastritis. Etiology, pathogenesis. Classification. Pathanatomy. Complications.
93. Chronic gastritis. Classification. Causes, the role of pH - infection, development mechanisms. Morphological picture. Signs of gastritis activity. The role of gastrobiopsy in clarifying the diagnosis. Precancerous conditions of the stomach.
94. Gastric ulcer and 12 tons of duodenal ulcer. Etiology, pathogenesis. Morphological picture during exacerbation and remission. Complications Outcomes.
95. Cancer of the stomach. Spread. Clinical and morphological classification Histological forms. Complications Metastasis.
96. Enteritis. Classification. Etiology, pathogenesis. Morphological manifestations. Outcomes. Complications
97. Colitis. Classification. Etiology, pathogenesis. Complications Outcomes.
98. Nonspecific ulcerative colitis. Etiology, pathogenesis. Morphological picture. Complications Pathomorphism of ulcerative colitis.
99. Crohn's disease. Etiology. Pathogenesis. Morphological picture. Complications Outcomes.
100. Appendicitis. Etiology, pathogenesis, Clinical and morphological forms, complications.
101. Intestinal tumors. Classification. Spread. Clinical and morphological forms. Metastasis, complications, outcomes, causes of metastases and relapses.
102. Toxic dystrophy of the liver, as a variant of hepatosis. Etiology, pathogenesis, morphology. Complications, outcomes.
103. Fatty hepatosis (liver steatosis). Etiology, pathogenesis, morphology, complications.
104. Hepatitis. Definition Classification. The role of puncture biopsy in the diagnosis. Morphological picture of hepatitis. Signs of hepatitis activity.
105. Chronic hepatitis. Classification. Etiology. Pathogenesis. Clinical and morphological forms, their characteristics. Complications Outcomes.
106. Alcoholic hepatitis. Etiology, pathogenesis, pathanatomy, complications, outcomes.
107. Cirrhosis of the liver. Concept. Classification Etiology. Pathogenesis. Morphological signs of cirrhosis. Hepatic and extrahepatic changes. Complications Outcomes.
108. Viral hepatitis. Classification. Etiology. Pathogenesis. Clinical and morphological forms, their characteristics. Complications Outcomes.
109. Liver cancer. Etiology, pathogenesis. Primary and secondary cancer. Classification. Morphology, complications, metastases. The disease.
110. Diseases of the gallbladder. Etiology, pathogenesis. Morphological picture of cholecystitis. Complications Outcomes.
111. Glomerulopathy. Modern classification. Etiology and pathogenesis. The role of immune mechanisms. Morphological characteristics of different types of glomerulopathies.
112. Nephrotic syndrome. Concept. Classification. Forms (lipoid nephrosis, membranous nephropathy. Renal amyloidosis). Etiology, pathogenesis, morphology, outcomes.
113. Amyloidosis of the kidney. Etiology, pathogenesis, stages, pathology.
114. Acute renal failure. Etiology, classification of causes, pathogenesis. Morphological picture in different clinical stages. Complications of Outcomes.
115. Chronic tubulopathies. Myeloma, a gouty kidney. Morphology. Complications Outcomes.
116. Kidney stone disease. Etiology, pathogenesis. Pathanatomy. The mechanism of the formation of stones. Complications of Outcomes.
117. Nephrosclerosis as the basis of CHP. Chronic renal failure. Etiology, pathogenesis. Pathanatomy, outcomes.
118. Pyelonephritis. Etiology, pathogenesis, morphology, complications, outcomes.

Ministry of science and high education RF Ulyanovsk State University Faculty of Medicine named after Biktimirov T.Z., IMEiPC	Form	
F-Educational plan of the discipline		

119. Kidney cancer. Types of kidney tumors. Metastases, complications, outcomes
120. Hypertrophy of the prostate gland. Forms. Morphological characteristics. Complications Prostate cancer, causes of prostate cancer.
121. Glandular hyperplasia of the uterine mucosa. Endocervicosis, causes, morphological characteristics
122. Inflammatory diseases of the mammary gland and genitals. Etiology, pathogenesis. Morphology. Outcomes.
123. Breast cancer. Forms and histological types of cancer. Ways of metastasis, causes of complications.
124. Cancer of the uterus (neck and body). Height. Histological types. Metastases
125. Toxicosis of pregnancy. Classification. Causes of death. Ectopic pregnancy, its types.
127. Bubble drift. Causes, pathogenesis. Morphology, complications, outcomes.
128. Pathology of the afterbirth. Perinatal pathology.
129. Diseases of the thyroid gland. Classification. Clinical and morphological forms. Morphological features of a base disease.
130. Classification of diseases of the thyroid gland. Goiter Hoshimoto, Riedel's goiter. Morphology, outcomes.
131. Thyroid tumors. Types of tumors. Evaluation criteria for malignant thyroid oxyxole.
132. Diseases of the parathyroid glands. Classification. Non-ferrous and glandular manifestations of pathology.
133. Diabetes mellitus. Etiology, pathogenesis. Types of diabetic angiopathy, diabetic glomerulosclerosis. Coma for diabetes.
134. Diseases of the pituitary gland: acromegaly, pituitary dwarfism, cerebral pituitary cachexia, Itsenko-Cushing's disease. Diabetes insipidus. Etiology, pathogenesis, main manifestations.
135. Adrenal gland disease. Adrenal cortical and adrenal cerebral syndrome. Addison's disease. Reasons, morphology.
136. General morphology of the infectious process. Local and general changes. Immunomorphological infections. Classification of infectious diseases. Pathogen. Entrance gate. Pathomorphism of an infectious disease.
137. Acute respiratory viral infections. Influenza, forms. Etiology, pathogenesis, morphology, complications. Causes of death.
138. AIDS. Etiology, pathogenesis, epidemiology. Pathanatomy, stages of development, complications, causes of death.
139. Rickettsioses. Features of infection, classification. Epidemiological typhus. Etiology, pathogenesis, pathanatomy, outcomes.
140. Typhoid fever. Etiology, pathogenesis, pathanatomy. Local and general changes at different stages of the development of the disease. Complications
141. Dysentery, etiology, pathogenesis, pathology, complications, causes of death.
142. Cholera. Etiology, pathogenesis. pathanatomy. complications, outcomes.
143. Amoebiasis. Etiology, pathogenesis, pathanatomy, complications.
144. Scarlet fever. Etiology, pathogenesis, pathanatomy. General and local changes. Complications The story.
145. Measles. Etiology, pathogenesis, pathanatomy, complications, outcomes.
146. Meningococcal infection. Etiology, pathogenesis, morphological forms, pathological anatomy, outcomes.
147. Tuberculosis. etiology, pathogenesis. Classification. Primary tuberculosis. Variants of the

F-Educational plan of the discipline		

12. EDUCATIONAL AND METHODOLOGICAL AND INFORMATION SUPPORT OF DISCIPLINE

Classrooms for practical training, for ongoing monitoring and intermediate certification are equipped with specialized furniture, a training board, a plasma panel for demonstrating micro-photographs, and there are also:

- macrodrugs - 64
- micropreparations - 800
- microscopes - 18
- digital micro-video camera
- cadaveric material (at autopsy) - sectional hall of the pathoanatomical department of the hospital.

The lecture halls are equipped with multimedia equipment for presenting information to a large audience.

The rooms for independent work are equipped with computer equipment with the possibility of connecting to the Internet and providing access to the electronic informational and educational environment, the electronic library system.

13. SPECIAL CONDITIONS FOR STUDENTS WITH DISABILITIES

If necessary, students from among persons with disabilities (at the request of the student) may be offered one of the following options for perceiving information, taking into account their individual psychophysical characteristics:

- for persons with visual impairment: in print in large print; in the form of an electronic document; in the form of an audio file (translation of training materials into audio format); in printed form in Braille; individual consultations with the involvement of a translator; individual tasks and consultations;
- for persons with hearing impairment: in print; in the form of an electronic document; video materials with subtitles; individual consultations involving an interpreter; individual tasks and consultations;
- for persons with disorders of the musculoskeletal system: in print; in the form of an electronic document; in the form of an audio file; individual tasks and consultations.

If it is necessary to use partly distance educational technologies in the educational process, the organization of work with students with disabilities and disabled people is provided in the electronic information and educational environment, taking into account their individual psychophysical characteristics.
