

PRACTICAL SKILLS

Requirements for the results of the discipline
The study of the discipline "Dermatovenereology" is aimed at forming among the trainees
the following general professional and professional competences:

№	Code	Content	Requirement:			
			Knowledge	Ability	Skills	Test method
1.	GPC-6	Medical Documentation	Fundamentals of the legislation of the Russian Federation, the main regulatory and technical documents	To conduct an outpatient card and a history of the patient with a dermatovenereological profile. Conduct an assessment of the social situation and assess its role in the spread of socially significant diseases	The methodology for calculating primary morbidity rates for socially conditioned skin diseases and sexually transmitted infections	Interview, testing of tasks to practical exercises, test control
2.	GPC-8	Readiness for medical use of medicinal products and other substances and their combinations in solving professional tasks	The main groups of drugs prescribed for diseases of the skin, mucous membranes and STIs. Clinico-pharmacological characteristics of the main groups of drugs and rational choice of specific drugs, in the treatment of skin and sexually transmitted infections	Develop a treatment plan for the patient, taking into account the course of the disease, select and prescribe a drug therapy, to use methods of non-drug treatment, to conduct rehabilitation measures. To introduce medical documentation of various nature in medical organizations of the pediatric profile	Evaluation of the health status of the population in different age and sex groups. Algorithm for setting a preliminary diagnosis followed by referral to an additional examination for specialist doctors. Algorithm for setting a detailed clinical diagnosis. Interpretation of the results of laboratory, instrumental methods of diagnosis	Interview, independent work with patients, test control

			Knowledge	Ability	Skills	Test method
4.	GPC-5	Readiness to collect and analyze patient complaints, his history, examination results, laboratory, instrumental, pathological anatomical and other studies for the purpose of recognizing the condition or establishing the fact of the presence or absence of disease	The main clinical manifestations of diseases of the skin and subcutaneous tissue, the features of their diagnosis and observation. Modern methods of clinical, laboratory and instrumental diagnostics of patients with dermatovenereological profile	Collect anamnesis, conduct a survey of the child and adolescent, his relatives, conduct a physical examination of a patient of different ages. To formulate a clinical diagnosis	Interpretation of the results of laboratory, instrumental diagnostic methods. Practical skills in conducting and evaluating special studies and samples used in dermatovenereology	Interview, verification of the solution of problems to practical exercises, test control, independent work with patients
5.	GPC-6	The ability to determine the main pathological conditions, symptoms, syndromes of diseases, nosological forms in patients according to the International Statistical Classification of Diseases and Health Problems (X revision) adopted by the 43rd World Health Assembly, Geneva, 1989.	The main clinical manifestations of diseases of the skin and subcutaneous tissue, the features of their diagnosis and observation. Main clinical manifestations of sexually transmitted infections	To determine the patient's special (dermatological) status: to collect anamnesis, to interview the patient and relatives, to conduct a special examination of the patient, to assess the patient's condition for making a decision on the need for medical assistance, and to conduct an initial examination of the skin and its appendages. Interpret the results of the survey, put the preliminary diagnosis to the child and adolescent, outline the amount of additional studies to clarify the diagnosis, formulate a clinical diagnosis	Algorithm for setting a detailed clinical diagnosis for patients. The terminology of the ICD-X sections on skin and STI diseases	Interview, verification of the solution of problems to practical exercises, test control, independent work with patients

№	Code	Content	Requirement:			
			Knowledge	Ability	Skills	Test method
6.	GPC-8	The ability to determine the tactics of managing patients with various nosological forms	Modern methods of clinical, laboratory and instrumental diagnostics of patients with dermatovenereological profile	To develop a treatment plan for a patient with a dermatovenereological profile, to select and prescribe drug therapy. Outline the scope of additional studies to clarify the diagnosis	Interpretation of the results of laboratory, instrumental methods of diagnosis	Interview, verification of the solution of problems to practical exercises, test control, independent work with patients
7.	GPC-9	Willingness to manage and treat patients with different nosological forms in outpatient and day hospital conditions	Clinico-pharmacological characteristics of the main groups of drugs for the treatment of skin and STI diseases in patients. Indications for the hospitalization of patients in a specialized hospital dermatovenereological profile	To develop a treatment plan for a patient with a dermatovenereological profile, to select and prescribe drug therapy. Use non-drug methods treatment	Skills to provide children and adolescents with first medical assistance in the event of emergency and life-threatening dermatological states	Interview, verification of the solution of problems to practical exercises, test control, independent work with patients
8.	GPC-10	Willingness to provide medical care for sudden acute illnesses, conditions, exacerbation of chronic diseases, not accompanied by a threat to the life of the patient and not requiring emergency medical care	Tactics of management of patients with studied skin diseases and sexually transmitted infections	Assign treatment to a patient with acute or chronic dermatovenereological pathology	Interpretation of the results of laboratory, instrumental methods of diagnosis and treatment of patients with acute and chronic skin and STI diseases	Interview, verification of the solution of problems to practical exercises, test control, independent work with patients
